

Compensator SAE 1" to 5"

Rubber compensators are elastic connectors with turnable SAE flanges. Compensators are used for damping oscillations, vibrations, noises and movements in axial and transversal direction.

Design

Rubber compensators have a plain surface vulcanized to a fabric body (inside and outside) of the rubber part. The outside is weather resistant and protects the fabric against ageing, wear and corrosion. The interior of the rubber part consists of nitril-butadien-caoutchouc (NBR). The outer layer is made of CR (chloroprene rubber). Because compensators have tightening lips on both sides, further seals are not necessary.

Use

For all mineral oil products (except synthetic oils), crude oil, lubrication oil, cooling oil (-20°C up to 80°C), grease (mineral), cold water, warm water up to 60°C, water/oil emulsions, fuel with 30% aromatic content. For operation in suction and return lines.

*... NG = nominal size

Material

rubber inside	NBR
rubber outside	CR/NR (Chloroprene/Naturalrubber)
rubber hardness	70 shore ±5
flange	steel

Working Pressure

maximum working pressure	NG25 to NG80 0,5 - 1,5bar (absolut) NG90 to NG125 0,7 - 1,5bar (absolut)
temperature range	-20°C bis +80°C

Please read manual before installation and for the maximum movement tolerances of the rubber connection! Note, that the dimension tolerances have to be taken from the corresponding scale drawing.
